

# **Web-Protection feature is not Starting up even after clicking on start button**

First of all Check if the layer is enabled or not.

(Note : For checking the layer type "sporder" in start > run. and check that MWTSP and microworldNSP is present)

if the layer is not loaded then run the below command to enable the layer inst\_tsp  
1 1

If the problem is still there then check the mwtsp.dll and mwnsp.dll files are present in C:\windows\system32 folder.

Unique solution ID: #1025
