

eScan Other: How can I block porn images in search engines?

Follow the below steps:

1. Pause eScan protection (Right click on red shield icon and click on "Pause Protection")
2. Open Command Prompt (Elevated mode)
3. Goto the eScan directory and open Mailscan.ini
4. Add the entry "SafeSearch=1" (without quotes) in the [Config] section and save the file.
5. Resume the eScan protection.
6. Start the Web & Parental Control module and enable the user profile setting.
7. Restart the system.

Now if you search for "porn" in the search engine, and try to view the images, porn images will not be displayed.

Note: Will not work with eScan Anti-virus edition

Unique solution ID: #1289
