

Installation: eScan SMB & Corporate version 11.0.1139.1277 compatibility on Windows 8 and Windows 2012

**: eScan SMB & Corporate version 11.0.1139.1277 compatibility on Windows 8 and
Windows 2012 :**

You can install/deploy eScan Client on Windows 8 and Windows Server 2012 operating systems.

However, you cannot install eScan as a Server using the Microsoft SQL 2005 Express edition (which is incorporated in eScan Server installation for managing the escan clients database) on these Operating Systems due to the compatibility issue of this particular SQL edition with the said OS.

So, if you want to install eScan Server on these Operating Systems then you need to first install "Microsoft SQL Server 2008 Express" free edition and then during eScan Server installation wizard you need to select that installed SQL instance which will be used by eScan for the database purpose.

Also, if you have installed "Microsoft SQL Server 2008" paid edition, then during eScan Server installation simply select that installed SQL instance.
