

eScan Anti-Virus Security for Mac: Unable to load eScan in MAC OS High Sierra (10.13).

In MAC OS High Sierra (10.13), Apple have added additional Security Preferences, which requires manual intervention.

A notification shall appear of a new feature introduced with macOS 10.13 High Sierra. This feature enforces that only kernel extensions (KEXT) approved by the user will be loaded on a system. When a request is made to load an extension that the user has not yet approved, the load request is denied and macOS presents an alert.

To resolve the same, steps are given as below:

- 1) Go to Security & Privacy option in Mac,
- 2) In the General Section, Click the Allow Button (for the message System Software from Developer "MicroWorld" was Blocked from loading)
- 3) Reboot the system

Unique solution ID: #1390
