

# **eScan Mobility Management (EMM / eScan MDM): What is COD? How can COD be handled with eScan EMM?**

COD stands for Company Owned Device, in COD the device belongs to company/organization and are given to Employees for doing office related work/tasks. With eScan EMM COD devices can be handled by the COD group type. Eg: The devices that belong to the Corporate/Organization can be added to the group having type COD. As the devices belong to the company and are not owned by the user, Policy will be applied to the devices always. Restrictions as per the policy will be applied always irrespective of the Geo/WIFI location.
