

eScan Mobility Management (EMM / eScan MDM): What is the practical use of Containerization in eScan EMM?

With Containerization in eScan EMM, the administrator can achieve the below 1. Deploy Apps, Documents, PDFs etc to the container. 2. Apps will be installed within the container and will store the related data inside the container. 3. The data within the container is encrypted and cannot be accessed from outside the container. 4. The container can be removed from the Management console, thus removing/erasing all the data within the container.
