WebConsole: Autostart programs does not start after reboot (Win7)

Issue reported: Autostart programs does not start after reboot (Win7)

Solution Provided: It was found that the consctl.exe was not allowing the programs in the Autostart to start. As the "eScan Updater" service starts the "Consctl.exe, the service "eScan Updater" was set to "Automatic (Delayed)" from the services.msc

Please Note: The option "Automatic (Delayed)" is available in Windows Vista and above. /Automatic (Delayed)/ is a new startup type that starts the service a short while after the system has finished booting and initial busy operations.
