Registration and Activation: I get the error message "Another Standard key cannot be added...." while adding a new license key?

"**Sorry! Another Standard Key cannot be added before activating the existing Standard Key**" error message while adding a new license key

You can enter up to 2 license keys without registering any of them, if you try to enter the third key without registering any of the keys entered previously you get this error message. Please activate the any of the license keys that are already added, this will allow you to add the third license key.
