

eScan for Windows: What does EnableOplocks do?

As shared on our below wiki link regarding the issue "While Saving the Excel (.xls) files in network it use to take 10-15 seconds, which was slow, after installing eScan"

<http://wiki.escanav.com/wiki/index.php/Escan/english/eScan-Troubleshooting/Installation>

eScan Hotfix (espatch1.exe) can also be executed with the /OplockAdd parameter which adds Oplocks entry EnableOplocks=0 in

HKLM\System\CurrentControlSet\Services\lanmanserver\parameters

Please refer to below link for more details about Opportunistic Locking.
